P00–Wiki: Design document outlining how to build wiki.
2024-10-21
Time Spent: 1
TARGET SHIP DATE: {yyyy-mm-dd}

Program Components:

1. Front End HTML
 - a. Wiki Display Page
 - i. Should display the wiki, have an option to log in as “Developer”
 - b. Developer Page
 - i. Should display to the user the wiki/have options to edit the wiki.
 - ii. Should take inputs to add sections of the wiki/add new pages to the wiki.
 2. Middle Flask + Python
 - a. App.py
 - i. Runs the front end HTML through Flask to render the site.
 - ii. Has page switching, accesses backend
 - iii. Stores sessions/developer login (could also be stored in backend)
 - b. Other Python Files, one to store in database information potentially
 3. Backend SQLite3
 - a. Pages Database
 - i. Database of the pages in the wiki
 - b. Other information database
 - i. Other databases may be necessary to hold other information.
-

Component Relationships:

- HTML is rendered through Flask and Python app.py, which uses database information.
 - Data entered by the user goes through app.py to the database.
-

Map:

Databases:

1. Database of different pages (each with their own database) on the wiki (so they can all be accessed).
 2. Database of information on the page.
-

Site Map:

1. Display Page (Displays Wiki)
 - a. Other pages on the Wiki
2. Developer Page (allows edits)
 - a. Shows options such as add a new page/modify an existing page

Linkages:

1. Display Page → other pages on wiki via going to see other existing pages.
2. Display Page → login w/ developer account → Developer Page.
3. Developer Page → logout → Display Page.

~~~~~

Assignments:

- Frontend HTML: Christopher
- Python + Flask: Kyle & Raymond
- SQLite: Kevin
